**Excel 2021** Jul 19 2019 "Excel 2021" officially became Best Seller, in the year 2021, in Kindle and Books categories. Want a handy, up-to-date guide to quickly learn basic Excel functions? Want to know the tips, tricks and shortcuts that make Excel more powerful? Are you looking for an effective Excel guide for beginners? Do you want basic Excel commands explained to you in detailed, easy-to-learn language? If the answer to at least one of these questions is yes, "Excel 2021" is for you. I created "Excel 2021" to help you. Microsoft Excel is regarded as reliable and efficient spreadsheet software and is often recognized as an indispensable tool in many businesses. Microsoft Excel is a spreadsheet program that is often used in the organization of personal data. In addition, Microsoft Excel is also used to create charts and other visual representations that facilitate data analysis. "When you start using a software, to master it, you have to learn its main commands." "Excel 2021" saves you from searching for days in online tutorials for the essential Excel commands you need to use it to the fullest. "Excel 2021" is made to make your learning easier. Here are some things you'll learn with "Excel 2021": Why learn Microsoft Excel? How to enter basic formulas and calculations in Excel? How to select, activate and edit cells in Excel? How to put a Signature on Microsoft Excel? Basic math in Excel Convert a text file or csv file into an excel spreadsheet Way to solve common printing issues in Excel much more. Excel Works with almost all other office software. "Knowing how to use Excel makes it much easier for you to achieve your work goals." In fact, Excel spreadsheets can be easily added to Word documents and PowerPoint presentations to create more dynamic and effective reports or presentations. **Balance Sheet Structures** Jan 05 2021 Balance sheet structures is a practical and comprehensive guide to balance sheet issues. The book begins by covering the financial theory necessary for an understanding of the debt versus equity issue and then focuses on real world issues by discussing answers to the questions Why do companies have balance sheets structured as they are? Do industry differences rule the structure? Does a multinational differ greatly from a domestic company? Does management's attitude to risk have any effect? These questions are looked at through a series of case studies, mostly written by those who are responsible for the balance sheet structures they are living with. The book also aims to help the reader understand the interrelationship between debt and equity in terms of the overall value of the company and the impact on the company's cost of capital. It covers the various elements that make up the balance sheet, and the costs and benefits that attach to each and goes on to analyse the interrelationship between the business that the company is in, the maximisation of cash flows and the balance sheet that matches the business reality. Balance sheet structures is an invaluable and concise guide intended for a wide range of interested parties, treasurers, bankers, directors and students of business and economics.

**Shinto and the State, 1868-1988** Mar 07 2021 Helen Hardacre, a leading scholar of religious life in modern Japan, examines the Japanese state's involvement in and manipulation of shinto from the Meiji Restoration to the present. Nowhere else in modern history do we find so pronounced an example of government sponsorship of a religion as in Japan's support of shinto. How did that sponsorship come about and how was it maintained? How was it dismantled after World War II? What attempts are being made today to reconstruct it? In answering these questions, Hardacre shows why State shinto symbols, such as the Yasukuni Shrine and its prefectural branches, are still the focus for bitter struggles over who will have the right to articulate their significance. Where previous studies have emphasized the state bureaucracy responsible for the administration of shinto, Hardacre goes to the periphery of Japanese society. She demonstrates that leaders and adherents of popular religious movements, independent religious entrepreneurs, women

seeking to raise the prestige of their households, and men with political ambitions all found an association with shinto useful for self-promotion; local-level civil administrations and parish organizations have consistently patronized shinto as a way to raise the prospects of provincial communities. A conduit for access to the prestige of the state, shinto has increased not only the power of the center of society over the periphery but also the power of the periphery over the center.

**Natural Gas Conversion** Aug 20 2019 These proceedings reflect the extensive fundamental and applied research efforts that are currently being made on the conversion of gas, in particular on the direct conversion of methane. The Symposium in Oslo focused on the following topics: Direct conversion of methane, Fischer-Tropsch chemistry, methanol conversion and natural gas conversion processes. The main aim was to present the state-of-the-art and progress currently being made within each of these areas. The book contains the papers presented and includes plenary lectures, short communications and posters. The papers will be of interest to scientists and engineers working in the field of gas conversion, transportation fuels, primary petrochemicals and catalysis.

**Diesel Engine Transient Operation** Jul 31 2020 Traditionally, the study of internal combustion engines operation has focused on the steady-state performance. However, the daily driving schedule of automotive and truck engines is inherently related to unsteady conditions. In fact, only a very small portion of a vehicle's operating pattern is true steady-state, e. g. , when cruising on a motorway. Moreover, the most critical conditions encountered by industrial or marine engines are met during transients too. Unfortunately, the transient operation of turbocharged diesel engines has been associated with slow acceleration rate, hence poor driveability, and overshoot in particulate, gaseous and noise emissions. Despite the relatively large number of published papers, this very important subject has been treated in the past scarcely and only segmentally as regards reference books. Merely two chapters, one in the book *Turbocharging the Internal Combustion Engine* by N. Watson and M. S. Janota (McMillan Press, 1982) and another one written by D. E. Winterbone in the book *The Thermodynamics and Gas Dynamics of Internal Combustion Engines, Vol. II* edited by J. H. Horlock and D. E. Winterbone (Clarendon Press, 1986) are dedicated to transient operation. Both books, now out of print, were published a long time ago. Then, it seems reasonable to try to expand on these pioneering works, taking into account the recent technological advances and particularly the global concern about environmental pollution, which has intensified the research on transient (diesel) engine operation, typically through the Transient Cycles certification of new vehicles.

**Encyclopedia of Automotive Engineering** Oct 14 2021 A Choice Outstanding Academic Title *The Encyclopedia of Automotive Engineering* provides for the first time a large, unified knowledge base laying the foundation for advanced study and in-depth research. Through extensive cross-referencing and search functionality it provides a gateway to detailed but scattered information on best industry practice, engendering a better understanding of interrelated concepts and techniques that cut across specialized areas of

engineering. Beyond traditional automotive subjects the Encyclopedia addresses green technologies, the shift from mechanics to electronics, and the means to produce safer, more efficient vehicles within varying economic restraints worldwide. The work comprises nine main parts: (1) Engines: Fundamentals (2) Engines: Design (3) Hybrid and Electric Powertrains (4) Transmission and Driveline (5) Chassis Systems (6) Electrical and Electronic Systems (7) Body Design (8) Materials and Manufacturing (9) Telematics. Offers authoritative coverage of the wide-ranging specialist topics encompassed by automotive engineering An accessible point of reference for entry level engineers and students who require an understanding of the fundamentals of technologies outside of their own expertise or training Provides invaluable guidance to more detailed texts and research findings in the technical literature Developed in conjunction with FISITA, the umbrella organisation for the national automotive societies in 37 countries around the world and representing more than 185,000 automotive engineers 6 Volumes [www.automotive-reference.com](http://www.automotive-reference.com) An essential resource for libraries and information centres in industry, research and training organizations, professional societies, government departments, and all relevant engineering departments in the academic sector.

**Creative Writing Bouquet** Oct 22 2019 The authors of this Bouquet are people like you. Retired, living in the Lutheran Homes at Glynde, with freedom at last to pursue things they have always wanted to do. Intrigued by a flyer in their letterboxes offering a creative-writing group, the long-held desire to write overcame their hesitation. They came along, one Tuesday afternoon, to meet with Dorothy O'Neill, a Homes resident and the author of several books, to find out more. Every first and third Tuesday in the month, for a year, these seven women worked diligently with Dorothy, to discover and develop the skills they never knew they had. Using simple and homely topics, they drew on their experience, imagination and wisdom to create the varied pieces collected here. Through the group, these strangers found the satisfaction of creative work and the fun and fellowship of a shared endeavour. So here is a bouquet of their work - short stories, poems, spiritual reflections - to prove that creativity flowers in all of us if we will let it: age open, experience not required.

*Driving and Engine Cycles* Mar 27 2020 This book presents in detail the most important driving and engine cycles used for the certification and testing of new vehicles and engines around the world. It covers chassis and engine-dynamometer cycles for passenger cars, light-duty vans, heavy-duty engines, non-road engines and motorcycles, offering detailed historical information and critical review. The book also provides detailed examples from SI and diesel engines and vehicles operating during various cycles, with a focus on how the engine behaves during transients and how this is reflected in emitted pollutants, CO<sub>2</sub> and after-treatment systems operation. It describes the measurement methods for the testing of new vehicles and essential information on the procedure for creating a driving cycle. Lastly, it presents detailed technical specifications on the most important chassis-dynamometer cycles around the world, together with a direct comparison of those cycles.

Find out what works and what doesn't, which turbo is right for your needs, and what type of set-up will give you that extra boost. Bell shows you how to select and install the right turbo, how to prep your engine, test the systems, and integrate a turbo with EFI or carbureted engine.

**Isaf Vehicles Afghanistan 2007** Nov 22 2019 This book is a fascinating and revealing look at the vehicles used by ISAF forces in Afghanistan. The author is a serving army officer who spent some time in the Kabul and Kandahar regions in 2007. His photos and detailed colors and markings notes form the basis of this new book, which will be invaluable to anyone interested in modern-day conflicts or modelers of modern military vehicles. The author is donating his royalties from this book to two service charities: Dick Taylor joined the British Army as a Junior Leader in 1976, and served as a tank crewman and commander in the 3rd, 2nd and 1st Royal Tank Regiments, reaching the rank of Warrant Officer Class One. He has served in many countries worldwide, including in Australia, Canada, USA, Egypt, India, Malaysia and South Africa. He has served operationally in Northern Ireland, Cyprus, Bosnia and Croatia, Macedonia, Kuwait and Iraq, as well as in Kosovo where he was awarded the Queens Commendation for Valuable Service. He was commissioned in 2000, and his specialties have included tank gunnery instruction, Chemical, Biological, Radiological and Nuclear operations, Psychological Operations, and lately, defense exporting. He has a First Class degree in History, and is currently reading for a Master's degree at Dundee University. He is married with two sons and lives in Blandford, Dorset. Future MMP books from Dick include a 4-part series on British Army vehicle camouflage and markings from 1903-2003, "Warpaint" (Vol 1 due Jan 2008), and a fascinating look at the uniforms and equipment of British AFV crews in WW2, "The Men Inside the Metal" (due Spring 2008). Dicks' combination of active military experience and sound historical knowledge is unrivaled, and we are delighted to be able to offer his books to military enthusiasts everywhere. **REVIEWS** "a wonderful compendium of facts within a personal conceptual framework that sweeps the reader along in the adventure that was auto-rotational flight... an essential addition to the understanding of this unique aviation niche." **ROTCRAFT**, Volume 47, Number 6

*Jane's Tank Recognition Guide* Oct 02 2020 The aim of this book is twofold : firstly, to act as a convenient handbook for the reader to identify quickly and accurately almost any modern armoured fighting vehicle (AFV) in service today ; secondly, to provide key information on the vehicle. Includes : light tanks and main battle tanks ; tracked APCs / weapons carriers ; 4 x 4 vehicles ; 6 x 6 vehicles ; 8 x 8 vehicles ; self-propelled guns.

*Biomass to Biofuels* Nov 03 2020 Focusing on the key challenges that still impede the realization of the billion-ton renewable fuels vision, this book integrates technological development and business development rationales to highlight the key technological developments that are necessary to industrialize biofuels on a global scale. Technological issues addressed in this work include fermentation and downstream processing technologies, as compared to current industrial practice and process economics. Business issues that provide the lens through which the technological review is performed span the entire biofuel value chain, from financial mechanisms to fund biotechnology start-ups in the biofuel arena up to large green field manufacturing projects, to raw material farming, collection and transport to the bioconversion plant, manufacturing, product recovery, storage, and transport to the point of sale. Emphasis has been placed throughout the book on providing a global view that takes into account the intrinsic characteristics of various biofuels markets from Brazil, the EU, the US, or Japan, to emerging economies as agricultural development and biofuel development appear undissociably linked.
