Accounting Jun 02 2020 The tenth edition of Accounting (Hoggett et al.) provides an introductory but comprehensive description of the purpose, practice and process of contemporary international financial and management accounting in an Australian context. With the increased emphasis on the globalisation of business, the material is ideal for the study of introductory accounting in a broad international context. The tenth edition builds on the strengths of previous editions with a strong focus on the decision-making role of accounting, as well as on a student's acquisition of generic skills such as communication, analytical, problem solving, critical thinking and judgement skills. The technical skills required in the application of accounting concepts still remain a core objective of the new edition.

*Technical Analysis of Stock Trends* Jul 04 2020 2011 Reprint of 1958 Fourth Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. In 1948 Robert D. Edwards and John Magee published "Technical Analysis of Stock Trends" which is widely considered to be one of the seminal works of the discipline. It is exclusively concerned with trend analysis and chart patterns and remains in use to the present. As is obvious, early technical analysis was almost exclusively the analysis of charts, because the processing power of computers was not available for statistical analysis. "Technical analysis" is a financial term used to denote a security analysis discipline for forecasting the direction of prices through the study of past market data, primarily price and volume. Behavioral economics and quantitative analysis incorporate technical analysis, which being an aspect of active management stands in contradiction to much of modern portfolio theory.
