Idiomatics: The Weird and Wonderful World of Popular Phrases Oct 07 2020 Idiomatics is a unique exploration of the world of idiomatic phrases. The very etymology of the word 'idiom' reveals what's so endlessly fascinating about the wide range of colourful phrases we use in everyday speech: their peculiarity. They're peculiar both in the sense of being particular or unique to the culture from which they originate, and in the sense of being downright odd. To cite three random examples - from American English, Dutch and Italian - what on Earth are a snow job, a monkey sandwich story, and Mr Punch's secret? Fascinating and illuminating, Idiomatics explains all... The ideal gift for word buffs and in fact, anyone who enjoys a good yarn, this playful book looks at 12 groups of idioms around the world, looking at subjects such as fun and games, gastronomic delights and the daily grind.

ICT Developments in Nigerian Libraries Nov 19 2021 Annotation Nigeria seems to be behind in a lot of areas North American, European, Australasian and even S.E. Asian librarians will say been there, done that long ago but that does not negate the fact that articles about the experience of placing computers in libraries, automation of processes, use of CD-ROMs, introduction of the Internet and so on are just as valid from people doing it now, today for the first time, as they were from when many of us did it 20 or 30 years ago.

[The Carnivorous Lamb](#) Jan 28 2020 The latest in the Little Sister's Classics series resurrecting gay and lesbian literary gems: a viciously funny, shocking yet ultimately moving 1975 novel, an allegory of Franco's Spain, about a young gay man (the self-described "carnivorous lamb") coming of age with a mother who despises him, a father who ignores him, and a brother who loves him. Author Agustin Gomez-Arcos left his native Spain for France in the 1960s to escape its censorship policies. The Carnivorous Lamb, originally written in French, won the Prix Hermes, and this, its 1984 English translation, was widely acclaimed.

[If Fried Chicken Could Fly](#) Jun 22 2019 At Gram's Country Cooking School, Betts and Gram are helping students prepare the perfect dishes for the Southern Missouri Show-Down, the cook-off that draws the first of the summer visitors. Everything is going smoothly until they discover the body of local theater owner Everett Morningside in the school's supply closet, and Everett's widow points an accusatory finger at Gram. Now, Betts has to dig deep into Broken Rope's history to find the modern-day killer-before the last piece of chicken is served...

Illustrated Guide to the Homeopathic Treatment Sep 05 2020 Especially written for the benefit of the new practitioners of homeopathy and laymen who are interested to learn homeopathy and treat the common ailments of their family and themselves. [Ice Composition and Glacier Dynamics](#) Aug 17 2021 Ice composition has until now been mostly used for reconstructing the environment of the past. A great research effort is made today to model the climate system in which the ice cover at the earth surface plays a prominent role. To obtain a correct model of the ice sheets, due attention must be paid to the physical processes operating at the interfaces, i. e. the boundary conditions. The idea behind the title of this book is that the study of ice composition can shed some light on the various processes operating at the ice bedrock and ice-ocean interfaces and more generally on glacier dynamics. The book is not intended as a treatise on some specialized topic of glaciology. It is mainly the product of the experience of the two authors gained over several years research on the subject. The two authors are both members of the same university department and personal friends. The book was prepared in the following way. After a first draft of the complete book had been written by the first author, it was put in the hands of the second. The final version sent to the publishers is therefore the result of extended discussion, while at the same time preserving the unity of style that would have been lost had the two authors written selected chapters of the book individually. The book is organized into two distinct parts.

The Biopolitics of Gender Sep 29 2022 This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

Positive Lightning Aug 29 2022 Kate Winter teaches dog owners how to train their canine companions. During her spare time, accompanied by her Lab, Dakota, she explores the woods and beaches on foot or horseback. She's worried that something's happening in her relationship, but she can't get her girlfriend Trish to talk to her about it. Faith Hutchins recently lost her sight after a terrible outdoor accident. She's dealt with her anger, depression, and blindness primarily on her own. A seeing-eye dog would help alleviate her reliance on anyone else, but the guide dog school has been unsuccessful in providing her with one. On a mission to find someone who will train a dog specifically for her, she ultimately zeroes in on Kate. They say lightning never strikes the same place twice. But positive lightning is notoriously unpredictable and can ignite a fire when and where least expected . . . no matter who's in its path."

[Ice Forged](#) Nov 07 2020 From one of the most exciting writers of fantasy adventure comes the first novel in The Ascendant Kingdoms Saga, a tale of unpredictable magic, battling warlords, and the lust for vengeance set in the unforgiving frozen wastes at the edge of the world. Condemned as a murderer for killing the man who dishonored his sister, Blaine "Mick" McFadden has spent the last six years exiled in Velant, a penal colony in the frigid northern wastelands. Harsh military discipline and the oppressive magic keep a fragile peace as colonists struggle against a hostile environment. But the supply ships from Dondareth have stopped coming, boding ill for the kingdom that banished the colonists. Now, as the world's magic runs wild, McFadden and the people of Velant must fight to survive and decide their fate . . . Praise for the Ascendant Kingdoms Saga "Epic fantasy as it was meant to be read: gripping, action packed, and larger than life. A delight for any fan of the genre!" —Rachel Aaron "Epic fantasy at its best." —Aaron Rosenberg "A vivid, engrossing tapestry woven from epic heroism, post

apocalypse struggles, perilous magic and darkest fantasy. A distinct and distinctive achievement." —Juliet McKenna "A book that will take over readers' thoughts until long after the final page." —RT Book Reviews

All-in Fighting Apr 24 2022 The author of this concise guide to unarmed combat and self-defence is a legend. W. E. Fairbairn (1885-1960) spent over thirty years in the tough environment of the Riot Squads of China's Shanghai Municipal Police. In order to lower levels of Police mortality at the hands of Chinese Tongts, he studied ancient Chinese and Japanese martial arts, including Ju-jitsu, and was the first foreigner to be awarded a black belt in the discipline. He developed his own system which he called 'Defendu'. At the outbreak of the Second World War, he was recruited by Britain's Special Operations Executive as an Instructor in unarmed combat and expounded the deadly mysteries of attack and defence to scores of trainee agents about to be dropped into occupied Europe. His methods were approved and officially adopted throughout the British army. Fairbairn also developed weapons and defence aids such as bullet proof vests. He is best known as the co-inventor of the famous Sykes-Fairbairn knife. In this book he expounds his distilled experience of unarmed combat. Fully illustrated, it shows how to deliver deadly blows with hand, fist, knee and boot; wrist, bear- and strangle holds (and how to break them); how to throw an enemy, and how to break their backs; how to disarm a pistol-wielding attacker; and securing a prisoner. The book also contains a chapter on the use of the rifle in close combat by Captain P. N. Walbridge.

**If God Is Good: Why Do We Hurt?** Sep 25 2019 The encouragement we crave—when we're most in need Out of the deepest hurts of the human condition, Randy Alcorn brings into clear focus our most pressing questions about evil and suffering—including those that wrench our souls when we or someone we love is victimized by evil or assaulted by disease. He faces these questions with seasoned sensitivity, skillful insight, and a heart of compassion. He dodges none of the difficulties, and never lapses into platitudes, hand-wringing, or oversimplification. On this troubling but inescapable topic, you'll find frank acknowledgment of the inherent limitations that set humanity apart from the God who has none. There's also generous, real encouragement that brings God nearer in our understanding when we need His comfort the most. And amid our heavy doubts and swirling confusion on this topic, Randy Alcorn points us ultimately toward Jesus as "the only answer bigger than the questions."

**Ice** Mar 12 2021 Like the adventurer who circled an iceberg to see it on all sides, Mariana Gosnell, former Newsweek reporter and author of Zero Three Bravo, a book about flying a small plane around the United States, explores ice in all its complexity, grandeur, and significance. More brittle than glass, at times stronger than steel, at other times flowing like molasses, ice covers 10 percent of the earth's land and 7 percent of its oceans. In nature it is found in myriad forms, from the delicate needle ice that crunches underfoot in a winter meadow to the massive, centuries-old ice that forms the world's glaciers. Scientists theorize that icy comets delivered to Earth the molecules needed to get life started, and ice ages have shaped much of the land as we know it. Here is the whole world of ice, from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring, from the frozen Antarctic landscape that emperor penguins inhabit to the cold, watery route bowhead whales take between Arctic ice floes. Mariana Gosnell writes about frostbite and about the recently discovered 5,000-year-old body of a man preserved in an Alpine glacier. She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth's climate and try to predict its future. She examines ice in plants, icebergs, icicles, and hail; sea ice and permafrost; ice on Mars and in the rings of Saturn; and several new forms of ice developed in labs. She writes of the many uses humans make of ice, including ice-skating, ice fishing, iceboating, and ice climbing; building ice roads and seeding clouds; making ice castles, ice cubes, and iced desserts. Ice is a sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in. It is a pleasure to read, and important to read—for its natural science and revelations about ice's influence on our everyday lives, and for what it has to tell us about our environment today and in the future.

**Ice Song** Apr 12 2021 "Reminiscent of Ursula Le Guin's paradigm-shattering *The Left Hand of Darkness*, this piercingly moving story belongs in most fantasy collections."—Library Journal There are secrets beneath her skin. Sorykah Minuit is a scholar, an engineer, and the sole woman aboard an ice-drilling submarine in the frozen land of the Sigue. What no one knows is that she is also a Trader: one who can switch genders suddenly, a rare corporeal deviance universally met with fascination and superstition and all too often punished by harassment or death. Sorykah's infant twins, Leander and Ayeda, have inherited their mother's Trader genes. When a wealthy, reclusive madman known as the Collector abducts the babies to use in his dreadful experiments, Sorykah and her male alter-ego, Soryk, must cross icy wastes and a primeval forest to get them back. Complicating the dangerous journey is the fact that Sorykah and Soryk do not share memories: Each disorienting transformation is like awakening with a jolt from a deep and dreamless sleep. The world through which the alternating lives of Sorykah and Soryk travel is both familiar and surreal. Environmental degradation and genetic mutation run amok; humans have been distorted into animals and animal bodies cloak a wild humanity. But it is also a world of unexpected beauty and wonder, where kindness and love endure amid the ruins. Alluring, intense, and gorgeously rendered, *Ice Song* is a remarkable debut by a fiercely original new writer. Praise for *Ice Song* "A stunning debut fantasy about love and the ties of blood."—Armchair Interviews "Kasai's debut is a boldly adventurous tale depicting a richly detailed world. The aspect of Traders shifting gender brings Ursula K. LeGuin's *The Left Hand of Darkness* to mind, while the activities on Chen's island are more reminiscent of Laurell K. Hamilton's Meredith Gentry novels."—Booklist "Ice Song is definitely a compelling read, largely due to the fact that Sorykah is such a well-developed character. She has an equally intense and complex sense of love and resentment for her children. And the fact that she exists between the world of humans and the mutants is also a source of conflict for her character. . . . Ice Song is a near-perfect combination of fantasy, great storytelling and social commentary."—Philadelphia Gay News

Identification and Characterization of Neural Progenitor Cells in the Adult Mammalian Brain Jun 02 2020 Adult neurogenesis has been questioned for many years. In the early 1900s, a dogma was established that denied new neuron formation in the adult brain. In the last century however, new discoveries have demonstrated the real existence of proliferation in the adult brain, and in the last decade, these studies led to the identification of neural stem cells in mammals. Adult neural stem cells are undifferentiated cells that are present in the adult brain and are capable of dividing and differentiating into glia and new neurons. Newly formed neurons terminally differentiate into mature neurons in the olfactory bulb and the dentate gyrus of the hippocampus. Since then, a number of new research lines have emerged whose common objective is the phenotypical and molecular characterization of brain stem cells. As a result, new therapies are successfully being applied to animal models for certain neurodegenerative diseases or stroke. At present, and in years to come, this finding extends to the adult human brain, and gives reason and hope to all the previous studies.

Ice Shear Jul 24 2019 A small town cop's murder investigation turns deadly when she uncovers a web of politics and drugs linked to an outlaw motorcycle gang in this gripping debut suspense novel for fans of Winter's Bone, Frozen River, Breaking Bad, and Sons of Anarchy. As a cop on the night shift in Hopewell Falls, New York, June Lyons drives drunks home and picks up the donuts. A former FBI agent, she ditched the Bureau when her husband died, and now she and her young daughter are back in upstate New York, living with her father, the town's retired chief of police. When June discovers a young woman's body impaled on an ice shear in the frozen Mohawk River, news of the murder spreads fast; the dead girl was the daughter of a powerful local Congresswoman, and her troubled youth kept the gossips busy. Though June was born and raised in Hopewell Falls, the local police see her as an interloper—resentment that explodes in anger when the FBI arrive and deputize her to work on the murder investigation. But June may not find allies among the Feds. The agent heading the case is someone from her past—someone she isn't sure she can trust. As June digs deeper, an already fraught case turns red-hot when it leads to a notorious biker gang and a meth lab hidden in plain sight—and an unmistakable sign that the river murder won't be the last.

If Better Is Possible Jul 16 2021 From the most successful cricket coach of all time comes the secret to coaching success. Ice Age Extinction Mar 24 2022 Global warming seen from the other side: by the end of the last ice age, the earth had lost most of its large animal species and most of its humans. In a novel approach the author argues that the main cause of this catastrophic extinction was a drastic reduction in atmospheric carbon dioxide, due to the long period of cold, and he backs up his theory with scientific explanations given in clear language for the general reader. The author explores the causes of Earth's cyclical temperature changes and shows how those temperature shifts touch off a chain of events in the atmosphere, in the oceans and on land. Cold temperature was the trigger; and the resultant reduction in carbon dioxide, he argues, was the bullet that killed off so many species. The re-warming released more carbon dioxide into the atmosphere and fueled a resurgence which we are still enjoying. In addition, the author describes the human responses to increases in atmospheric carbon dioxide after the last ice age and in the last 150 years. Near the end of the last ice age, atmospheric carbon dioxide was about half of what it is today. Due to the lack of carbon dioxide, most of the vegetation disappeared from the middle and high latitudes. Without plants to eat, many large animals became extinct; North America lost three-fourths of its large animals including the woolly mammoth, mastodon, and saber tooth cat. Humans, too, had little to eat in these areas and their population declined dramatically. The book then explains how and why atmospheric carbon dioxide increased by about 50% after the last ice age ended, encouraging a population explosion among plants, animals and humans, all of which then migrated into many previously barren areas. More recently, the 28% increase in atmospheric carbon dioxide in the last 150 years has caused a six-fold increase in the human population. Changes in the next 300 years will reverse some of the current trends. There have been some books on the causes of extinction over the last forty years, but all looked at other causes and none examined the role of low atmospheric carbon dioxide. This book has value for anyone interested in the ice age extinction; glaciers; the glacial cycle; the

atmosphere and oceans; the past and future of plants, animals, and humans. It provides long-term information on atmospheric carbon dioxide, global warming and cooling.
