Tax Incentives for the Creative Industries May 23 2022 This book combines insights from cultural economics, public finance, and tax law, providing an accessible and comprehensive introduction in the application of tax incentives for the creative industries. It does not have a single-country focus, but instead uses the perspective and examples of various countries around the world. The book starts with a theoretical part, introducing the concepts of creative industries and of tax incentives: how can the creative industries be defined, why do governments support the creative industries and how can tax incentives be applied as policy instrument. In the globalized and digitalized world in which the creative industries operate, restrictions imposed by guidelines on harmful tax competition and state aid and regulations influencing the (im)possibility of applying tax incentives in cross-border situations have a great impact. For that reason these legal concepts are discussed as well in the theoretical part. Globalization also gives rise to questions on the cross border application of tax incentives. The example of cross border giving is discussed in this respect. The theoretical part is followed by a part that focuses on tax incentives for specific sectors of the creative industries: museums and cultural heritage, the audiovisual industries (film, tv and videogames), the art market, copyright and artists. This part uses insightful examples from various countries to illustrate the application of these tax incentives. As the book takes both an academic and a practical approach, it is of relevance to researchers, students, policy makers and readers involved in the creative industry who seek an in-depth and up-to-date overview of this alternative way for governments to support the creative industries.

Incentivising Angels Nov 05 2020 This book examines tax incentives for investors in start-up companies through a critical analysis of Australia's early-stage investors (ESI) program, and a comparison of that program with the United Kingdom's Seed Enterprise Investment Scheme (SEIS) upon which it is loosely modelled. It discusses the importance of innovation and the special role that venture capital plays in supporting start-ups, and

explains the policy rationale for introducing the ESI program as well as dissecting its technical requirements in detail. Special attention is devoted to the program's 'early stage' and 'innovation' requirements, which are crucial for determining whether a start-up qualifies for the tax incentives. The book is the first in-depth scholarly legal analysis of the ESI program and the first occasion it has been compared and contrasted with a foreign program. The comparative discussion of the ESI program with the SEIS program enables the authors to make suggestions for reforms to the ESI program so that it can better achieve its policy objectives. The fact that the book includes reform suggestions makes it particularly interesting for policy makers. It is also of broad relevance to legal and finance scholars and students as well as entrepreneurs, angels, venture capitalists and their advisors.

The Fiscalization of Social Policy Apr 10 2021 In 1970, a single mother with two children working full-time at the federal minimum wage in the US received no direct cash benefits from the federal government. Today, after a period of austerity, that same mother would receive \$7,572 in federal cash benefits. This money does not come from social assistance, family allowances, or other programs we traditionally see as part of the welfare state. Instead, she benefits from the earned income tax credit (EITC) and the child tax credit (CTC)-tax credits for low-income families that have become a major component of American social policy. In *The Fiscalization of Social Policy*, Joshua McCabe challenges conventional wisdom on American exceptionalism, offering the first and only comparative analysis of the politics of tax credits. Drawing comparisons between similar developments in the UK and Canada, McCabe upends much of what we know about tax credits for low-income families. Rather than attributing these changes to anti-welfare attitudes, mobilization of conservative forces, shifts toward workfare, or racial antagonism, he argues that the growing use of tax credits for social policy was a strategic adaptation to austerity. While all three countries employ the same set of tax credits, child US poverty rates remain highest, as their tax credits paradoxically exclude the poorest families. A critical examination of social policy over the last fifty years, *The Fiscalization of Social Policy* shows why the US government hasn't tackled poverty, even while it implements greater tax benefits for the poor.

Effectiveness of Fiscal Incentives for R&D Dec 06 2020 With growing academic and policy interest in research and development (R&D) tax incentives, the question about their effectiveness has become ever more relevant. In the absence of an exogenous policy reform, the simultaneous determination of companies' tax positions and their R&D spending causes an identification problem in evaluating tax incentives. To overcome this identification challenge, we exploit a U.K. policy reform and use the population of corporation tax records that provide precise information on the amount of firm-level R&D expenditure. Using difference-in-differences and other panel regression approaches, we find a positive and significant

impact of tax incentives on R&D spending, and an implied user cost elasticity estimate of around -1.6. This translates to more than a pound in additional private R&D for each pound foregone in corporation tax revenue.

Tax Arbitrage Oct 16 2021 International tax arbitrage has come under intense scrutiny since the global financial crisis, and is usually portrayed as a form of aggressive tax avoidance. Press coverage has often shown little understanding of the distinction between tax avoidance and tax evasion, describing the legitimate behaviour of taxpayer banks, financial institutions and multinational businesses in emotive terms and often inaccurately. This book aims to look at tax arbitrage, and demystify its practice. In a world where tax competition rather than tax harmonisation is the predominant norm, international tax arbitrage is a form of legitimate tax planning. The book starts with a review of some of the press coverage (including of recent court cases) and also examines campaigns by the Uncut pressure group. It considers the confusion over the boundary between 'legality' and 'morality'. It covers the responses of tax authorities in major western economies to calls for tax reform. This includes the choices to favour: substance or form worldwide or source taxation targeted legislation or general anti-avoidance rules. It considers the role of jurisdictional competition in tax avoidance arbitrage and the approach taken by a number of countries (including the UK, Ireland and Netherlands) to fiscal policy. A review of recent law reports in the UK, Italy, France, New Zealand, Australia, United States and South Africa involving tax arbitrage, helps to explain how it works, with detailed descriptions from court cases and flow charts of the structured finance arrangements. The appendices include an extract from the OECD Report "Building Transparent Tax Compliance by Banks" on international arbitrage financing transactions, and the UK "Code of Practice on Taxation for Banks" with guidance notes.
